

# Milliohmmeter RESISTOMAT<sup>®</sup> for Production and Laboratory

# Model 2316

burster

- Measuring ranges from 2 m $\Omega$  to 200 k $\Omega$
- Resolution up to 0.1 μΩ
- Accuracy 0.03 % Rdg.
- Autorange
- Temperature compensation for all materials
- Thermal e.m.f. compensation
- Input voltage protection up to 400 V<sub>rms</sub>
- RS232 and PLC interface (USB and Ethernet option)

#### Description

The device works according to the proven 4-wire measurement method which eliminates errors caused by test lead and contact resistances. Thermo voltages that might be in the measurement circle would be compensated automatically by this measurement method. The control of the measurement leads is done with an integrated cable fraction detection.

A temperature compensation for any given sample material such as copper, aluminium, tungsten, etc. is self-evident. The temperature measurement is done by an external Pt 100 sensor or by an external infrared measurement device (ref. to accessories). A special measurement voltage input protection was developed for testing large inductive samples so that voltage peaks do not cause permanent damage while pinching off the sample.

16 device settings such as the measurement range, limit values, temperature coefficient, etc. can be saved in order to test samples with different parameters in an automatic measurement system. All device specific settings are shown to the user via display. Calling up the settings is done via keypad or via PLC interface with a bit pattern (4-bits). It goes without saying that all device settings may also be effected via the available interfaces.

The high-contrast LCD display with backlight assures very good reading of the measurement value in dark as well as bright spaces.

### Application

Fast and accurate measurements of the smallest resistance values are possible with the milliohmmeter RESISTOMAT<sup>®</sup> model 2316. Due to the rugged aluminium injection moulding desktop housing with membrane keypad it is suitable for use in laboratory and industrial environment likewise.

Wires and coils can be measured with temperature compensation. The temperature of the sample is measured with a Pt 100 or pyrometer and the resistance is then corrected to the equivalent at e.g. 20 °C (adjustable) in the instrument.

The application range is very wide such as the measurement of:

- Transformer motor coil windings
- Coils of all kind
- Cables and wires on the drum or as meter samples
- Switch and relay contacts
- Heating elements
- Fuses
- Connections and transitions at power rails and many more

For a cooling curve recording with freely selectable time interval a data logger for up to 1000 values is available.

The complete control via RS232 interface enables the setup of fully automatic test stations. The instrument features a PLC interface for integration into production process control classification and makes selection of the samples an easy task.

## Menu

903-002316EN-5072-021514

## **Device and Documentation Software**

The software model 2316-P001 is especially developed for the device setting, measurement value evaluation as well as the printout of measurement reports.

System requirements:

Pentium 500 MHz (at least)

WIN 98SE and WIN NT 4.0)

approx. 200 MB free memory

(WIN ME, WIN2000, WIN XP, VISTA, WIN7)

VAG 800 x 600 (at least)

256 colours (at least)

64 MB RAM (at least)

128 MB RAM (at least)

RS232, USB or Ethernet

Processor:

Graphic:

Memory:

Hard Disk:

Interface:

A demo version is available at www.burster.com in the section Instruments & PC software.

#### Following features are available:

- Full control of RESISTOMAT<sup>®</sup> model 2316
- Online display of the measuring values including limits in graphic or tabular mode
- Direct storage of the measuring values with time stamp in ASCII files
- Export of all data in ASCII format to MS-EXCEL
- Printout of a test certificate with your own logo
- Complete cooling curve record and printout of motor
- and transformer windings with extrapolation in Excel
   Backup of device settings

## **Application Examples**

#### Quality control on wires and cable

- Testing of variable wire lengths from 100 mm ... 1000 mm measurement length
- The integrated temperature compensation allows a standardized resistance value in correspondence to the reference temperature (Germany e.g. 20 °C)
- Individual selection of material specific temperature coefficient

... in combination RESISTOMAT<sup>®</sup> 2316 and clamping device 2381

#### Cooling curve measurement on electric motors

OK

- Selectable sample rate
- Data logger for up to 1000 measurement values
- External control of load stop
- Transfer of measurement data to EXCEL via PC software

Options Gud 🕸

#### **Technical Data**

#### Construction

The device has a service-friendly construction in a sturdy aluminium die casting housing which enables good access to the various components. The operation is done via the membrane keypad. The connections for the sample, the in- and outputs of the RS232/PLC interface as well as the Pt100-sensors are located at the backside of the device.

The device features a diagnosis function for current source, amplifier, display, internal operation voltage and PLC I/O.

with relay (disconnectible) 24 V / 1A

Calibrations Sets:

1. The **calibration set model 2316 -Z010** consists of 4 calibration resistors series 1240 with the values 1 m $\Omega$ , 10 m $\Omega$ , 100 m $\Omega$  and 1  $\Omega$  as well as adapter model 2394, including one DKD/DAkkS certificate for each resistor. The added adapter model 2394 allows a direct contacting with the RESISTOMAT<sup>®</sup>. This calibration certificate documents the traceability to national

standards. Full description see data sheet 1240 EN

2. The **calibration set model 2316-Z011** consists of 3 calibration resistors 10 m $\Omega$ , 100 m $\Omega$  and 1  $\Omega$  as well as adapter model 2394. Otherwise as before mentioned.
